Subject: RE: Air Monitoring Changes

Dear Patrick – EPA approves these changes to the air monitoring plan for the tasks described below.

Thank you for your assistance.

Sincerely,

Joyce Ackerman
On-Scene Coordinator and START P.O.

Subject: Air Monitoring Changes

Joyce,

Per our discussion yesterday, 4/18/2018, Stratus proposes the following changes to air monitoring at the Neuhauser Landfill Site while conducting movement of stockpiled soils at the site as an amendment to the Ambient Air Monitoring plan dated December 5, 2017 which is in Attachment C of the previously approved DRWP dated December 2017.

Stockpiled soils deemed clean by EPA:

- No air monitoring, except the routine site perimeter air monitoring is required. It is noted EPA verbally approved this change, and that this work could commence prior to written approval.

Impacted stockpiled soils:

- The operator of the excavator or loader used to move the soils to an end dump truck (or similar) for disposal will have a PID in the cab and use respiratory protection as needed as outlined in the AOC.
- One member of the site personnel will monitor ambient air, using a PID, around a perimeter of the stockpile while soils are moved. The distance of the perimeter from the stockpile will be established so that site personnel outside the perimeter will not need respiratory protection due to the stockpiled soil movement activities (for example, a 50 ft. perimeter).
- Any site personnel entering the perimeter will wear appropriate respiratory protection as needed and have a PID readily available to assess breathing zone conditions.

Thanks,
Patrick
